Education

University of Toronto

Sept. 2025 - Dec. 2026

Master of Science in Applied Computing (MScAC) Concentration: Artificial Intelligence

National Institute of Technology, Warangal

CGPA: 9/10

Bachelor of Technology, Computer Science and Engineering

2021 - 2025

Industry Experience

Wells Fargo

May-July 2024

SDE Intern

Chennai, India

- Developed a secure chatbot extension for VS Code and IntelliJ IDEA, integrating NLP with Confluence API for real-time, developer query resolution and a Harness API extension to display logs and pipeline states within IDEs, reducing context switching and improving developer productivity by 40%.
- Leveraged JavaScript, VS Code API, Java AWT Swing, NLTK, and SpaCy while ensuring compliance with Wells Fargo's security protocols through collaboration with cross-functional teams.

Research Experience

Molecular Descriptors in Drug Design

Aug 2024 – Mar 2025

- Researched prediction of Cathepsin B, S, D, and K inhibitor potency using molecular descriptors, curating datasets from BindingDB and ChEMBL and classifying IC50 values into potency categories.
- Trained 1D CNN models with SMOTE to handle class imbalance, identifying potent drug candidates with 97% accuracy, and enabling deeper insights into structure activity relationships.

Deep Learning and IoT-based Mosquito Wingbeat Event Detection

Jan-Apr 2024

- Preprocessed raw mosquito wingbeat audio using log-mel spectrograms and PCEN, with data augmentation to enhance robustness in noisy environments.
- Developed a custom CNN-Temporal Convolutional Network with attention mechanisms, achieving over 90% accuracy in mosquito wingbeat detection.
- Seervi, A., Mulani, N., **Anwar, M. J.**, & Venkanna, U. (2025). **IoT-Enabled Intelligent Framework for Real-Time Mosquito Detection and Monitoring**. SN Computer Science, 6(5), 484.

Projects

SLM-nanoGPT

Sep 2025

Recreated a GPT-2-style model trained on the TinyStories dataset to explore transformer internals and LLM training.

- Implemented a small-scale LLM from scratch, gaining hands-on experience with tokenization, dataset preparation, and pretraining. Currently focused on learning more about advanced LLM architectures and techniques.

MLOps Weather Predictor

Sep 2025

End-to-end weather prediction pipeline for Toronto, forecasting weather codes using historical time-series data.

- Implemented a full MLOps pipeline with automated retraining, deployment, and monitoring to maintain production-ready performance. Engineered time-series features from historical weather data and trained an XGBoost model to predict weather codes.

Caption Crafter

July 2024

Generates catchy captions for Instagram posts

- Developed an end to end deep learning pipeline using DenseNet201 + LSTM for image captioning and integrated Groq Cloud API for dynamic hashtags.

Skills & Interests

Programming Languages: C++, Java, Python, JavaScript

Frameworks: Django, React, PyTorch

Interests: Computer Vision, Natural Language Processing, LLMs

Competitive Programming: ICPC Asia West regionalists.

Coursework

Computational Imaging, Neural Networks and Deep Learning, Visual and Mobile Computing, AI for drug discovery
